Armband – **GS AB1800**

It is designed for many models of mobile computers. It can be rotated 360°. With this armband, workers can wear the mobile computer on their arms and rotate it to whichever angle that is the best for reading in order to view the data at any time.

Armband – **GS AB2000**

The AB2000's direct affix design allows users to securely attach their mobile devices simply by sticking the protective case without any additional adjustments or modifications. Furthermore, it supports 360° rotation.

Wearable Accessories

Armband – **GS AB2200**

The AB2200 features a unique design where users can adjust the side screws to alter the width of the armband. This is particularly beneficial for individuals who frequently switch between different mobile terminals or have devices with varying dimensions.
